1.2 Introduction of Angles

1.2.1 To get the feel of an angle through observation of objects in their environment and paper folding:

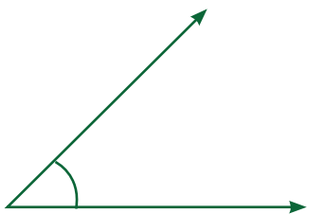

The angles are used in bridges, buildings, cell phone towers, wings of planes, bicycles, windows and doors.

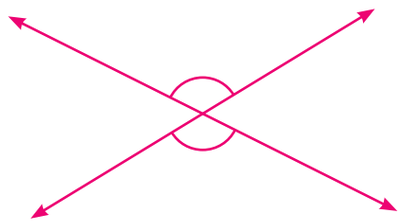

Angle:

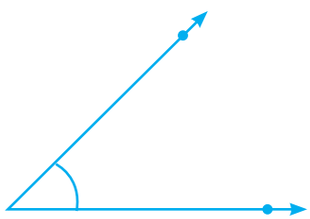

An angle is a shape formed by two line segment or rays diverging from a common point (Vertex).

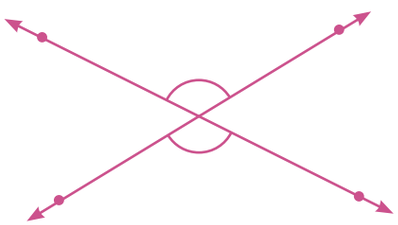

Angle formed by meeting of two rays.

Angle formed by intersection of two lines

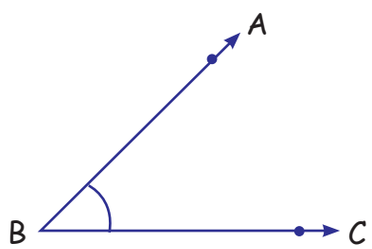

Angle formed by meeting of two line segments.

Angle formed by intersecting of two line segments.

Teacher : What does this picture convey?

Ramu : This picture shows an angle. Does angle have name sir?

Teacher : Yes. Angles have names. Can you see two line segments in this picture? Read the names of that.
