5.1 Railway time

We are using 12 hours clock generally. We use railway time in railway station, Defence department, television and internet. We cannot see or hear the a.m. p.m. in any train time table or announcement because the railway time represents time in 24 hours.

Generally railway times are written in 4 digits. The first two digits show the hour and the last two digits show the minutes.

24-Hours Clock

We can write,

Mid night 12 hour is 0000 hour or 24 hours		Noon 12 O'Clock – 12.00 hours
9. am – 09.00 O'clock		1. p. m – 13.00 hours (12+1) hours

While converting the 12 hour time to 24 hour time during pm we should add 12 to hours and keep the minutes same.
