Stage III: Precipitation - Wind movements cause the clouds particles to collide. They become rain bearing clouds and fall back onto the earth's surface by the process known as precipitation. This may occur in the form of rain, hail, snow or dew depending upon the temperature conditions.

Stage IV: Runoff and Infiltration - The water either runs off into oceans, rivers and ground surface or is absorbed into the soil (infiltration). This cycle continues.

Glossary

Collide : Crash

Phenomenon : Remarkable situation

Scarcity : Shortage

Recap

- Earth is made up of land, water and air.
- Water is necessary for all life forms.
- 3% of water is fresh water that is found in ground, lakes, ponds, streams and rivers .
- There are five major oceans in the world: The Pacific, Atlantic, Indian, Southern and Artic ocean.
- Waterfall forms when river falls from great height.
- We should use water carefully.
