Finding the angle of a square.

Angle of a circle is 360° ◯.

Let us find the angle of square using a circle.

= 360° ÷ 4 = 90°

Place 4 squares as shown in the above figure.

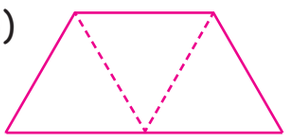

The shape formed at the centre is a circle. The angle of circle is 360°.

Now the angle of a square is 360° ÷ 4 = 90°.

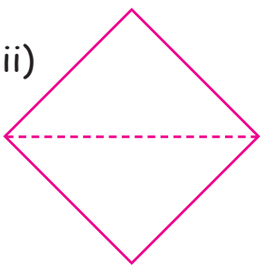

Exercise 3.1

1 **Find the angle of the given shapes using the equilateral triangle.**

i)

ii)

2 **Find the angles of a rectangle using a circle.**

3.3 Rotating angles

Giant wheel

Look at the rotation of the giant wheel.Every compartment moves to a position and comes back to the original position.
