moth and bats release their fragrance mostly at night and have colourless petals. E.g. Mango, Banana, Guava, Jasmine etc. The following table gives the names of the pigment present in petals.

Colour of the petals	Name of the pigment
Red, Pink, Blue, Purple	Anthocyanin
Yellow, Orange	Carotenoids
Green	Chlorophyll

Activity 1

Take a hibiscus flower or a rose flower. Display the parts like sepal, petal, gynoecium and androecium in a chart paper and note down their colour and shape.

Do you know?

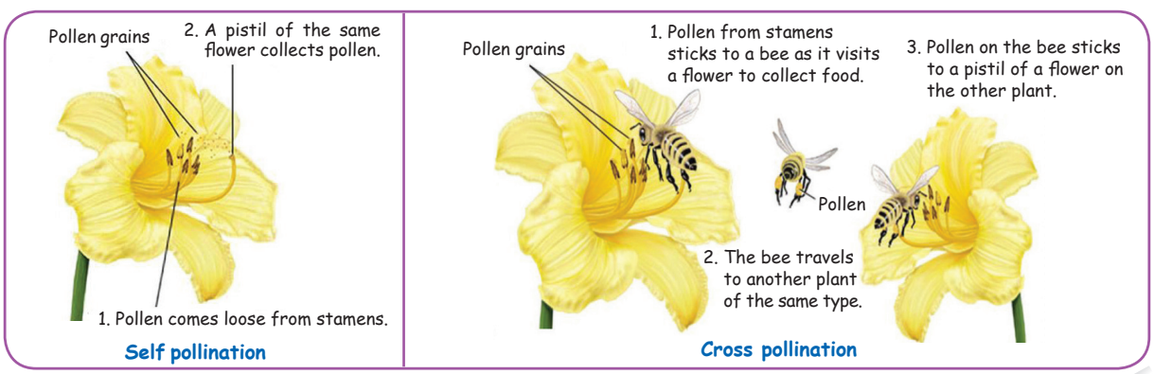

Kurinji or Neelakurinji (Strobilanthes kunthianu) is a shrub that is found in the Chola forests of the Western Ghats in South India. Nilagiri Hills, which literally means the blue mountains, got their name from the purplish blue **flowers** of Neelakurinji that blossoms once in 12 years.

2 Pollination

The transfer of pollen grains from the anther to stigma of a flower is called pollination. Pollination is the first important event in the development of fruit and seed. Pollination is followed by fertilization. Two types of pollination take place in the flowering plants. They are self pollination and cross pollination.

The transfer of pollen grains from the anther of a flower to the stigma of the same flower is called self pollination. The transfer of pollen grains of a flower to the stigma of another flower of a different plant of the same species is called cross pollination.
