Note: In your higher class you will learn about two more inequalities, that is '≥' and '≤'. These, two symbols can be read as, greater than or equal to (≥) and lesser than or equal to (≤).

Example 4.2

Fill in the boxes between the expressions with <, = or > as required in the following.

(i) $(7 + 8) \square (20 \div 2)$

Solution

First, we have to add 7 and 8

$7+8 = 15,$

Now, we divide 20 by 2, we get

$20 \div 2 = 10$

Therefore, $(7 + 8) \square (20 \div 2)$

$15 \boxed{>} 10$

Hence, $(7 + 8) \boxed{>} (20 \div 2)$.

(ii) $(12x3) \square (9x4)$

Solution

First, we have to multiple 12 by 3

$12 \times 3 = 36$

Now, multiplying 9 by 4, we get,

$9 \times 4 = 36,$

Since, (12×3) and (9×4) is equal, we have,

$(12 \times 3) \boxed{=} (9 \times 4)$.

(iii) $(15-5) \square (8x3)$

Solution

First, we have to subtract 5 from 15.

$15 - 5 = 10$

Now, multiplying 8 by 3, we get,

$8 \times 3 = 24$

Since, $(15 - 5 = 10)$ is less than $(8 \times 3 = 21)$, we have,

$(15 - 5) \boxed{<} (8 \times 3)$.
