1 OUR ENVIRONMENT

Learning Objectives

M6N6P4

After the completion of this lesson, students will be able to:

- Know about different types of farms.
- List out the economic importance of dairy farms and poultry farms.
- Know about Apiculture and the uses of honey.
- Understand the different types of manures and their uses.
- Know about vermiculture and vermicompost.

Introduction

Environment is everything that is around us. There are two types of environment. They are physical environment and biological environment. Physical environment includes all non-living things like land, water and air. Biological environment includes the living things such as plants and animals. Natural environment has lot of economic values. Plants and animals in our environment are useful to us in a number of ways. Animals like cow, buffalo and goat give us milk. Some animals are used for transportation. These animals are raised in farms. In this lesson we will learn about dairy farms, poultry farms, apiculture, manures and vermicompost.

I. Farms

Farming is the activity of growing crops and raising livestock. It is a part of agriculture. Agriculture is the cultivation of land and breeding of animals and plants to provide food, fiber, woods and medicinal plants to sustain and enhance life. But, farming is more profitable than agriculture. So it is done on a commercial scale. An area of land with fields and buildings that is devoted primarily to growing crops or raising domestic animals or both as a business is called farm. Large scale farms grow one or two major crops or animals. Middle sized and small sized farms grow different types of crops and animals.
