(i) Environmental Hygienic: The place where food is delivered, prepared and served.

Site should be free from air pollution and insects, water supply and sewage disposal should be taken care of. In structure, cleanliness of walls, floors, ceilings or any surface should be free from any hazards of infections.

Equipment like furniture and fittings need most attention to make it dust and dirt free. Thorough cleaning is required to avoid chemical residues that may contaminate food.

Need for proper ventilation is required in all areas of the kitchen. All kitchen should be provided with exhaust fans and extraction hoods above cooking range to remove impurities.

Kitchen should be well lighted to detect dirt, grease and infestation easily.

Water supply should be treated to ensure that it is fit for cooking and drinking and washing utensils.

Kitchen waste like peelings, trimmings, plate waste, spillage, empty cans and bottles must be disposed immediately from the kitchen, never be allowed to remain anywhere near the production, storage or service area. All these become contamination of food.

(ii) Hygienic Food Handling: In receiving food materials quality of food received will go a long way. Check for microorganisms, accidental chemicals and pesticides.

In storage proper methods should be followed.

1. Temperature prevailing in storages.
2. Humidity in the storage environment.
3. Presence or absence of any type of infection.

▲ Plate 8.17 Hygienic Food Service

Handling food at the stage of preparation is very important from hygienic point as in receiving and storing. Food should be cooked as quickly as possible after the preparation, unless frozen for later use. In food service establishment food should be held for some time before service. The holding temperature for food, within the danger zone is 10^0C to 62^0C. In service food care is necessary to see all serving equipment is clean and server is not in any
