persons who have access to storage areas. Storage areas should have easy access from the receiving area and from the preparation and production area. Storage areas should be clean, well ventilated and dry with adequate space for a smooth flow of work.

4.3.1 Types of Storage

In any type of food service operation three different storages are essential.

1. Dry storage
2. Refrigerated storage
3. Frozen storage

1. Dry Storage

Foods normally stored in dry storage include rice, dhal, flour, sugar, spices and canned foods. Normal room temperature for dry storage area should range from 10^0 to 21^0C. Care should be taken to see that there is enough air circulation with adequate ventilation and desired humidity. The food products should not be affected in any way by being exposed to direct sunlight near fire places, drainage or other utility pipes. Storage areas should be kept clean by following regular cleaning schedules.

i Shelving Units

Shelving units are used to store various dry goods prior to use.

Different types of shelving units are as follows

- 6 feet tall stainless steel wire shelving units.
- Corner shelves
- Overhead shelves
- Shelves designed to hold canned goods

▲ Plate 4.20 Shelving Units

ii Speed Rack

It is made of metals and have slots into which food handlers have slide sheeting pans. Heights of the shelves can be adjusted depending on the need.

2. Refrigerated Storage

A refrigerated storage is a storage space planned and maintained at a temperature between 0°C and 4^0C. It can be in the form of a complete room (walk in cooler) or a cabinet which is free standing or fixed on the wall.

Refrigerator storage is used for storing raw and cooked food. Care should be taken
