that there are no leakages from the containers in which these items are placed. It is not advisable to store hot items in refrigerated storage as it may take a long time for them to reach the cold temperature.

In order to store the perishable foods in the cold temperature in food service operation there are three types of refrigerators available namely,

- Walk-in refrigerator
- Reach-in refrigerator
- Roll-in refrigerator

3. Frozen Storage

The most perishable foods like milk and milk products, cakes, meat and fish are placed under frozen storage. Many items are readily available in the market in the frozen form making it important for a food service operation to have adequate frozen storage. Freezer space is also needed to store large quantities of items purchased.

4.4 Production Equipment

Production involves pre-preparation and preparation.

4.4.1 Pre-preparation

Quantity food production depends upon correct weights and measures. In order to obtain a standard product with a standard yield, it is essential that food should be weighed and measured accurately. A set of scales, measuring jugs, standard measuring cups and spoons can be used.
