are used to grate, chop or puree. The food cutter may be purchased with added feature for slicing, grinding and cubing.

4. **Food Slicers and Peelers:** When portion control is stressed the slicer will determine the amount to be sliced. Peelers are used to peel potatoes and other root vegetables with minimum waste by action on a revolving abrasive disc.
5. **Miscellaneous Tools:** Strainers, cutting board, rolling pins and knives are included. Knives like paring, utility, carving, slicing, butcher knives and cleavers are used.

4.4.2 Preparation

The equipment needed for preparation and cooking large quantities of food are given below:

1. Boilers

Many types are available in different metals and size. They may be heated by gas, electricity or steam from the main supply. The advantage of boilers is that they do not allow the food to burn.

▲ Plate 4.28 Boilers

Types of Boilers

There are three types of boilers namely

i. Pressure boiler – Boils rice
ii. Automatic boiler – Boils food at intervals
iii. Bulk boiler – Large quantities of food boiled at a given time

▲ Plate 4.29 Bulk Boiler

2. Steamers

They are sealed compartments where steam is allowed to come in direct contact with the food for cooking. Steaming ovens that work from a main steam supply needs little maintenance. This type of equipment is usually fitted with a gauge which registers
