DO YOU KNOW?

Exhaust Hood/Ventilator Hoods

Device with mechanical fan that hangs above the cooktops to remove airborne grease, combustion products, fumes, smoke, heat.

4.6.3 Cleaning Tools

Sanitation is a quality aspect that requires alert vigilance. It limits possible exposure to contamination.

Food service equipment of various qualities are available to meet the requirements of different styles of catering operations. The menu forms the basis for identifying the requirement of service equipment. Though different types of service equipment may be procured for dishes and drinks offered for sale, using multipurpose equipment not only saves money but also reduces storage space and maintenance cost. Purchasing of equipment is a managerial activity which calls for careful and wise decisions since it involves major capital investment. Every piece of equipment chosen must be justified and it should not remain idle.

Equipment must be maintained and handled carefully since poor handling leads to additional costs. Adequate training should be imparted to employee for proper handling of equipment. Too much of stock occupies more storage and involves additional cost and too less of it affect the operational efficiency. Hence it is important to strike a balance between these two and have just the right amount of service equipment.

▲ Plate 4.36 Cleaning Accessories

All equipment must be left clean after use. When sanitation of equipment is not effective in food production and while serving, food poisoning and food infections might occur and food service will lose its customers. Hence cleaning and sanitation operation should be verified on regular basis and it forms an important step in food service.
