6. Changes of colour due to Maillard browning reactions between milk, gluten and egg proteins with reducing sugars, as well as other chemical changes.
7. Crust formation.
8. Crust darkening from Maillard browning reactions and caramelization of sugars.

5.3 Preparation of Biscuits and Cookies

5.3.1 Biscuit

A small baked unleavened cake, typically crisp, flat and sweet.

Ingredients Needed: The main ingredients in most types of the biscuits are as follows:

1. Flour
2. Sugar
3. Fat
4. Water and milk
5. Baking powder
6. Essence

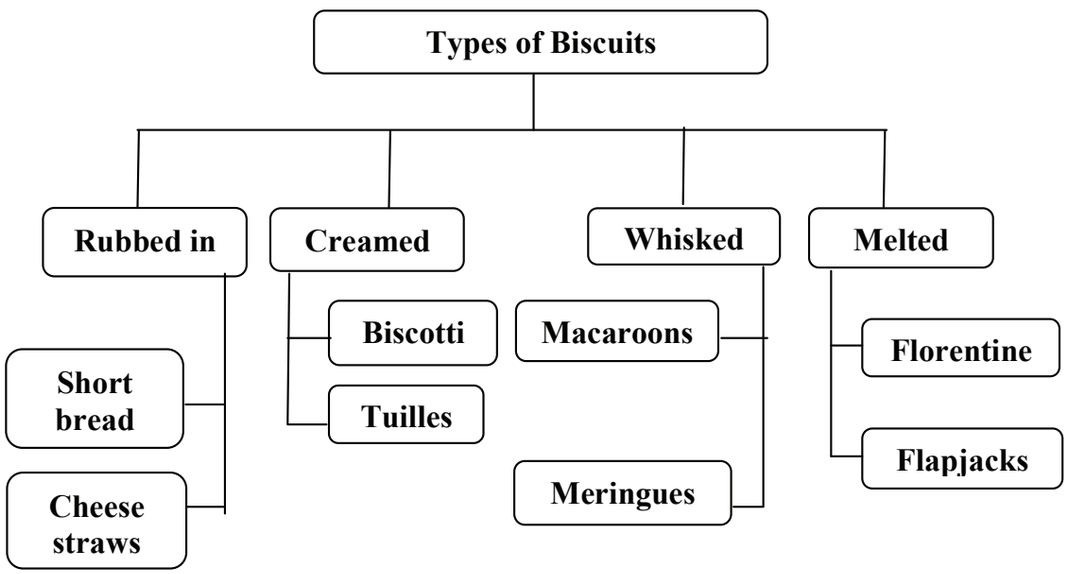

The relative proportions in which these ingredients are used differ according to the variety of biscuits being made. Aeration in biscuits is accomplished by means of baking powder.

Types of Biscuits

According to the methods of preparation, biscuits are divided into the following types:

1. Rubbed in Biscuits:

It is prepared by rubbing in the fat into the flour. This is done by placing the flour in a large mixing bowl, then adding butter which has been cut into pieces then rubbing both the ingredients together between the fingertips until the mixture resembles breadcrumbs.
