= 2 × (relative atomic mass of hydrogen atom)

= 2 × 1.008 u

= 2.016 u.

ii) Relative molecular mass of glucose ($C_6H_{12}O_6$)

= (6 × 12) + (12 ×1.008) + (6 ×16)

= 72+12.096+96

= 180.096 u

Table 1.1 Relative atomic masses of some elements

Element	Relative atomic mass	Element	Relative atomic mass
H	1.008	Cl	35.45
C	12	K	39.10
N	14	Ca	40.08
O	16	Cr	51.99
Na	23	Mn	54.94
Mg	24.3	Fe	55.85
S	32.07	Cu	63.55

Evaluate Yourself

2) Calculate the relative molecular mass of the following.

(i) Ethanol(C_2H_5OH)

(ii) Potassium permanganate ($KMnO_4$)

(iii) Potassium dichromate ($K_2Cr_2O_7$)

(iv) Sucrose ($C_{12}H_{22}O_{11}$)

1.4 Mole Concept

Often we use special names to express the quantity of individual items for our convenience. For example, a dozen roses means 12 roses and one quire paper means 24 single sheets. We can extend this analogy to understand the concept of mole that is used for quantifying atoms and molecules in chemistry. Mole is the SI unit to represent a specific amount of a substance.

To understand the mole concept, let us calculate the total number of atoms present in 12 g of carbon -12 isotope or molecules in 158.03 g of potassium permanganate, 294.18 g of potassium dichromate and 180 g of glucose.

12 Numbers = 1 Dozen

12 Roses

12 Balls

12 Apples

1 Mole ≡ 6.023×10^{23} entities

158.03g of $KMnO_4$

294.18g of $K_2Cr_2O_7$
