13. Subtract 1.35 from 3.51

(i) 6.21 (ii) 4.86 (iii) 8.64 (iv) 2.16

14. Sum of two decimals is 4.78. If one decimal is 3.21, then the other one is

(i)1.57 (ii) 1.75 (iii)1.59 (iv) 1.58

15. The difference of two decimals is 86.58 and one of the decimal is 42.31 Find the other one

(i) 128.89 (ii) 128.69 (iii) 128.36 (iv) 128.39

1.3.2 Multiplication of Decimal Numbers

Mathan wants to buy a shirt material which costs ₹75.50 per metre. He needs 1.5 metre to stitch a shirt. How much does he have to pay? Here we need to multiply 75.50 and 1.5. In real life, there are many situations where we need to multiply decimal numbers.

(i) Decimal multiplication through models

Let us try to understand decimal multiplication using grid model.

Let us find 0.1×0.1.

$0.1 = \frac{1}{10}$. Therefore, $0.1 \times 0.1 = \frac{1}{10} \times \frac{1}{10}$

That is, $\frac{1}{10}^{th}$ of $\frac{1}{10}$.

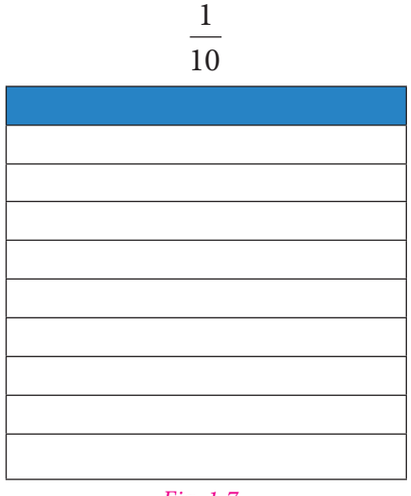

Fig. 1.7

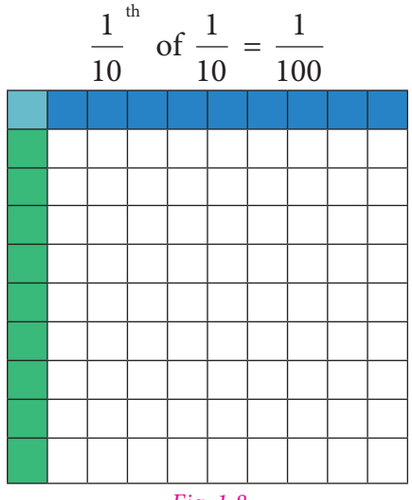

Fig. 1.8

Shade horizontally $\frac{1}{10}$ by blue colour (*Fig. 1.7*). Shade vertically $\frac{1}{10}$ by green colour (*Fig. 1.8*).

Then $\frac{1}{10}^{th}$ of $\frac{1}{10}$ is the common portion, that is $\frac{1}{100}^{th}$.

Therefore, $\frac{1}{10} \times \frac{1}{10} = \frac{1}{100} = 0.01$

Hence, $0.1 \times 0.1 = 0.01$.
