25. A sum of ₹ 46,900 was lent out at simple interest and at the end of 2 years, the total amount was ₹ 53,466.Find the rate of interest per year.

26. Arun lent ₹ 5,000 to Balaji for 2 years and ₹ 3,000 to Charles for 4 years on simple interest at the same rate of interest and received ₹ 2,200 in all from both of them as interest. Find the rate of interest per year.

27. If a principal is getting doubled after 4 years, then calculate the rate of interest.
(Hint : Let P = ₹ 100).

Summary

- Percentage is a fraction with denominator hundred
- To convert a fraction as percentage, multiply the numerator and denominator of the fraction by 100.
- To convert a percentage as fraction, write it is as fraction with denominator 100.
- To convert decimals into percentage, multiply the given decimals by 100%
- Principal is the money borrowed or lent.
- Interest is the additional money given by the borrower to use the principal for a certain period of time
- Rate of interest is the percentage of the principal paid every year.
- Time is the period for which the money is borrowed or lent.
- Amount is the total money returned by the borrower to the lender after a certain period of time. It is found by using Amount = Principal + Interest.
- Simple interest can be calculated by using $\frac{P \times n \times r}{100}$, where P – Principal, r – Rate of Interest, n – Time.
