Challenge Problems

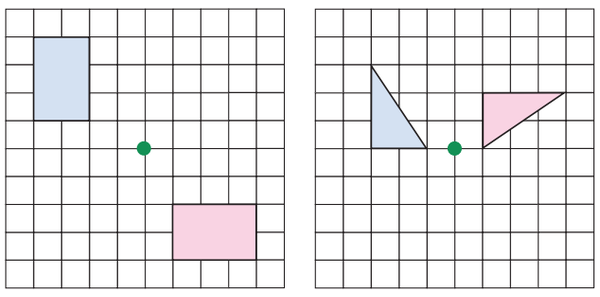

6. In chess, a knight can move only in an L-shaped pattern:
   - two vertical squares, then one horizontal square;
   - two horizontal squares, then one vertical square;
   - one vertical square, then two horizontal squares; or
   - one horizontal square, then two vertical squares.

Write a series of translations to move the knight from g8 to g5 [at most two moves].

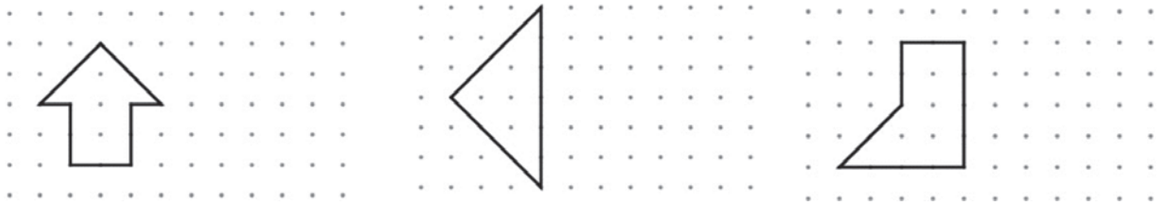

7. The pink shape is congruent to blue shape. Describe a sequence of transformations in which the blue shape is the image of pink shape.
