(2) To aid in normal body function.

(3) To prevent contractures and neuromuscular deformities and complications.

(4) To conserve maximum possible energy by preventing unnecessary strain.

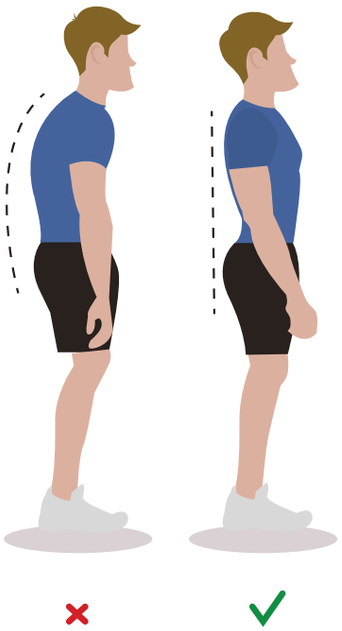

4.7.4 Normal positions.

Positions

1. Standing position:

In a standing position, the back should be straight; feet firmly on the ground, ***about 4 to 6 inches apart to give an adequate base of support,*** with the toes pointing straight ahead or slightly toed out; head and rib cage held high; chin, abdomen, and buttocks pulled in; and knees slightly bent.

2. Sitting position:

In a sitting position, the back should be straight, with the weight resting equally on the buttocks and under surface of the thigh, but not on the base of the spine.
