12. Hand rolls: These are made of cloth that is rolled into a cylinder about 45 inches long and 23 inches in diameter and stuffed firmly.		These are used to keep the fingers from being held in a tight fist leading to flexion contracture in patients who are unable to move the hands due to paralysis, injury or disease.
13. Thigh rolls (Trochanter rolls): These are made by folding a sheet to a desired length of 23 feet and then rolled into a tight cylinder. These are used to support the hips and thighs, preventing the limbs from outward rotation and keeping the feet in good alignment.		In case of paralysis, fracture of the femur or hip surgery. To use the roll, place the lose end (flap) under the patients hips and thighs with the role under the flap end and then tucking snugly along the hip and thigh.
14. Cradle: These are mostly semicircular in shape, made of wood or metal. These are used to prevent the weight of top bedclothes on patient's feet and toes. To use the cradle. Place it over the bottom bedclothes and the top bedclothes are then brought over the cradle.		These are used for patients affected by burns.
15. Restraints: The forcible confinement or control of a patient.		Are used to prevent agitated patients, persons who get out of bed at night in their sleep and small children, from falling out of bed.
