4.8.5 Other Safety Precautions to be taken in the hospital:

- Patients should be safeguarded from fire accidents and from careless application of heat.
- Fire accidents occur mainly due to allowing patients to smoke in the bed.
- Improper use of electric appliances and careless use of oxygen cylinders.
- Patient may get injured from careless application of hot water bags, electric pads and application of medications on the skin.
- Poisonous drugs should be kept under lock and key with specific red label.

4.8.6 Other causes of infection in the hospital are:

1. Bacteriological sources.
2. Rodents.
3. Food and water
4. Insects.

STUDENT'S ACTIVITY

Demonstration of safety and comfort devices.

Fact

A Hospital-Acquired Infection (**HAI**), is also known as a **nosocomial infection**. It is an infection that is acquired in a hospital or other health care facility.

Patient safety is a serious global public health issue. There is a **1 in 300** chance of a patient being harmed during health care.(WHO, 2017)

4.9 ACTIVITY AND EXERCISES.

4.9.1 Introduction

Bhuvana, a 36 year old lady got admitted with the complaints of fracture of the left leg, head of femur. She was operated and has to be mobilized after 2 weeks. She needs to resume her normal activity. Nurse Rekha, helps her with her daily activities and also helps her with the exercises she needs.

4.9.2 Importance of Activities of daily living:

Activity and exercise are necessary for healthy living. Activities usually performed in a day are eating, dressing, grooming, bathing, brushing etc. These activities are called activities of daily living.It is essential for meeting the day to day needs of an individual.

When a patient is not able to meet his basic needs, it is the nurse's responsibility to help the patient to meet their needs. According to their health status of the patient, the degree of assistance required will vary according to the needs of the patients. Exercise is the performance of physical exertion for improvement of health or the correction of physical deformity.

4.9.3 Benefits of exercise:

1. Exercise strengths muscles.
2. Helps to prevent constipation.
3. Increases appetite.
4. Improves sleep.
5. Stimulates blood circulation.
6. Improves lung ventilation.
7. Prevents obesity.
8. Promotes physical and mental well being.
9. Promotes urinary function.
10. Regulates body temperature.
