4.9.4 Types of exercises.

I. Active exercise	Indications	Example
Active exercise is a type of physical activity accomplished by the patient without assistance. These exercises help the patient to attain the normal physiological function of the body.	(1) Deep breathing and coughing exercise for complete lung expansion usually done by post operative patient. The patient can do it thrice in a day.	Nurse Rekha helped Bhuvana to do the deep breathing exercises as shown in the figure.

1.

2. Exercise of the limbs through full range of motion which include flexion, extension, adduction, abduction and rotation.
