

Highlight

A bowel obstruction, bladder cancer, kidney disease, and gallbladder disease disrupt normal elimination. Difficulty in breathing, poor circulation, acid-base imbalance, allergies, cuts, wounds, diabetes, and infection also hinder adequate elimination.

DO YOU KNOW?

The best method of elimination is by squatting, rather than sitting as it eliminates any form of colon cancers.

CONCLUSION

1. Nursing is the process of recognizing, understanding and meeting the health needs of any person or society and is based on a constantly changing body of scientific knowledge.
2. There are five steps in nursing process. They are assessment, diagnosis, planning, implementation, and evaluation.
3. Application of nursing process.
4. The entrance of a patient into a health care agency is termed as admission.
5. Nurses are responsible for the admission and discharge which takes place in the ward.
6. Skilful bed making contributes materially to the patient's comfort.
7. Beds are of two type of beds, ordinary, and special beds.
8. Body mechanics means the cooriented use of the body parts to produce motion and maintain equilibrium in relation to both internal and external forces.
9. The hygiene refers to the science of health and its maintenance, the prevention of disease, and sanitary practices.
10. Comfort is a sense of mental and physical well being.
11. Restraints are used to prevent agitated patient's who get out of bed at night in their sleep and small children, when falling out of bed.
