12. While lifting heavy objects flex your knees so that your strong muscles of the legs bear the weight of the object.
13. Patients with respiratory dysfunction are treated with oxygen therapy to relieve "anoxaemia or Hypoxemia". The normal amount of oxygen in the blood must be in the range of 80 to 100 mm of Hg.
14. Oxygen can be administered by the ways of nasal catheter/cannula, nasal prongs, B.L.B. mask, and an oxygen tent.
15. Elimination is the process by which waste products are removed from the bowel and bladder by means of faeces and urine.
16. Exercise is the performance of physical exertion for improvement of health or the correction of physical deformity.
17. Getting adequate rest and sleep is an important component of overall health and quality of life.
