Highlights.

Many infections, like colds and the stomach flu, (diarrhoea, cramps, nausea, vomiting and fever.) are the result of bringing germ-filled, unwashed hands into contact with the mouth. Other infections are caused when you eat food that has been contaminated by the dirty hands of other people.

Fact

Soaps are water-soluble sodium, potassium or salts of fatty acids. Soaps are made from fats, oils, or fatty acids, by treating them chemically with a strong alkali.

Quote

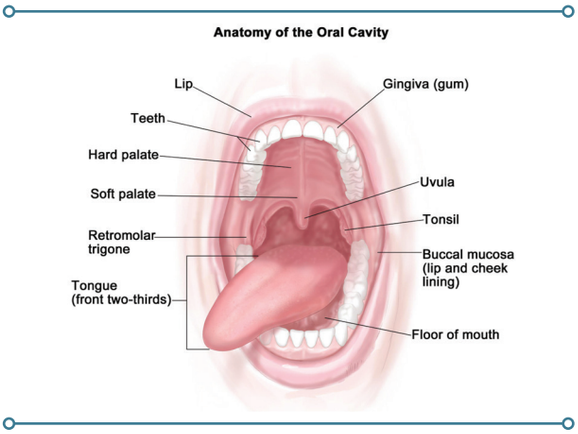

"Cleanliness is next to Godliness."

5.3 ORAL HYGIENE

5.3.1 Introduction

In human anatomy, the mouth is the first portion of the alimentary canal that receives food and produces saliva.A nurse needs to maintain the oral hygiene of the patient in order to promote his appetite so that his nutritional needs are met.

5.3.2 Anatomy of the Oral cavity

The oral cavity represents the first part of the digestive tube. Its primary function is to serve as the entrance of the alimentary tract and to initiate the digestive process by salivation and propulsion of the alimentary bolus into the pharynx. It consists of the teeth, soft palate, tongue, uvula and tonsil. The oral cavity is lined with mucous membrane and continuous with the skin. The mucous membrane is an epithelial tissue that lines and protects organs, secretes mucous which keeps the passage of the digestive system moist and lubricated, and absorbs nutrition.

5.3.3 Oral hygiene

Definition: Oral hygiene is the practice of keeping one's mouth clean and free of disease and other problems (e.g. bad breath) by regular brushing and cleaning between the teeth. It isimportant that oral hygiene be carried out on a regular basis to enable prevention of dental disease.
