Skin problem	Image	Treatment
3. ***Psoriasis:*** Thick, red patches of skin covered with white or silvery scales are signs of psoriasis.		• Creams. • Ointments. • Light therapy. • Medications taken by mouth, injection, or IV.
4. ***Eczema:*** Eczema means inflamed, red, dry, and itchy skin.		• Several medications treat eczema. • There are tablets, creams and injections available.
5. ***Cold Sores (Fever Blisters):*** The herpes simplex virus causes small, painful, fluid-filled blisters on the mouth or nose.		• It can be treated with antiviral pills or creams.
6. ***Skin Tags:*** This small flap of flesh-colored or slightly darker tissue hangs off your skin by a stalk.		• These are treated by cutting, freezing, or burn them off.
7. ***Acne:*** Acne breaks out when a pore clogged with oil and dead skin cells gets inflamed.		• Keep oily areas clean and don't squeeze (this may cause infection and scars).
8. ***Moles:*** Moles, which are usually brown or black, can be anywhere on the body.		• **No medication,** but pay close attention to anychange, with irregular borders, or has an unusual or uneven color, bleeding, or itching.
