before the laboratory can report findings of bacterial growth.

Urine test for sugar

Purposes of Sugar test: Testing the urine for the persons and the amount of sugar provides the doctors with information about the amount of insulin needed by the patient.

Preparation of the patient:

1. On the previous day explain the procedure to the patient.
2. Explain the patient when the urine to collect how to collect and the amount to be collected.
3. Provide an appropriate container and demonstrate to him how to use it
4. Instruct him not to contaminate the out side of the bottle.
5. Ask the patient to wash the internal genitalia with soap and water and rinse it with water.
6. If the patient is unable to do himself the nurse assists him.

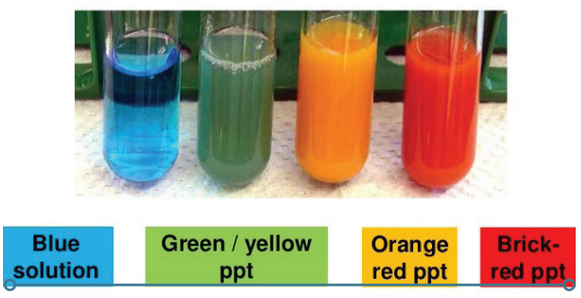

Preparation of articles

Correct collection and preparation of urinary specimens for diagnostic testing contributes to accurate test results. Bedside tests for urine glucose and acetone must be done precisely according to the direction to obtain accurate results. Timing of reading is crucial and the result may be incorrect if the reading is taken too early or too late.

Patient condition:

Presence of sugar in the urine is glycosuria
Presence of ketone in the urine is ketonuria.

Sample of the Label

Name of the Patient:_____
Ward/Bed No. _____
Age: _____ Sex: _____
OP/IP. _____
Name of Specimen: _____
Nature of Test to be Done: _____
Date of Collection: _____
