ABNORMALITY OF STOOL

Blood in stool different forms are,

Haematochezia: Passage of bright red blood per rectum mixed with 'or' without stool, ex:haemorrhoids, anal fissure & fistula, trauma, ischemic colitis, diverticulitis, polyps, malignancy etc.

Melena: Characteristics are black tarry (sticky) stool (use to production of acid haematin). Offensive (acid haematin is altered by bacteria). Semisolid in consistency. Redcoloured fluid comes out from the Usually associated with vertigo, dizziness 'or' syncopal attack during defecation.

Occult Blood Causes are: Intake of NSAID, hookworm infestation & colorectal cancer etc.

SPUTUM

Sputum is the mucous secretion from the lungs, bronchi and trachea. It is important to differentiait from saliva, the clear liquid secreted by the salivary glands in the mouth, sometimes referred to "spit". 30 ounces of mucus produced/day.

Healthy Individuals do not produce sputum. Clients need to cough to bring sputum up from the lungs, bronchi, and trachea into the mouth in order to expectorate at into a collecting container. Document amount of sputum collected, color, odour consistency (thick, tenacious, watery) and presence of haemoptysis'.

CONCLUSION

Health assessment includes physical assessment, mental status examination, laboratory investigation. Techniques of physical assessment are inspection palpation, percussion, manipulation, auscultation and observation. Vital signs are measurements of the body's most basic functions. The four main vital signs routinely monitored by medical professionals and health care providers include the following: Body temperature, Pulse rate, Respiration rate Blood Pressure, Vital signs are useful in detecting or monitoring medical problems. Vital signs can be measured in a medical setting, at home, at the site of a medical emergency, or elsewhere.
