Unit 2

ANATOMY AND PHYSIOLOGY

RXTS6U

LEARNING OBJECTIVES

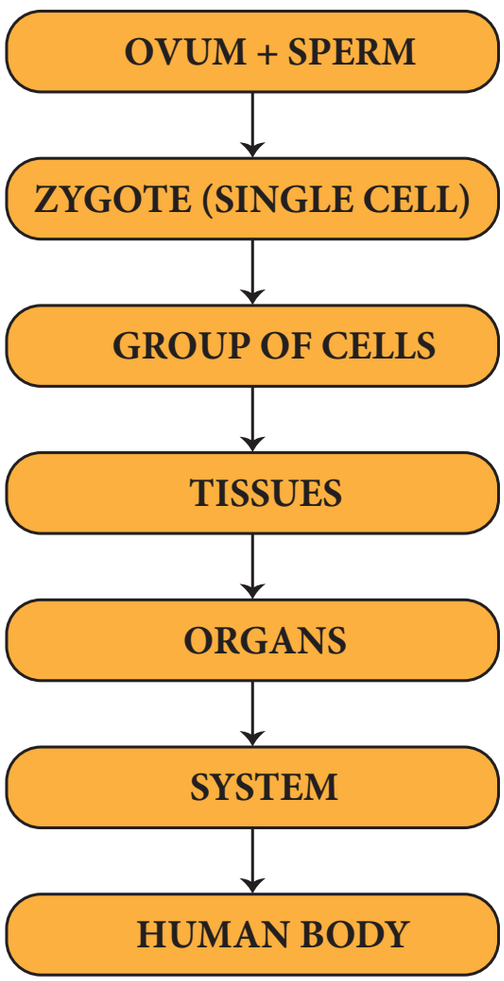

At the end of this chapter, the students will be able to,

1. Identify various tissues, organs, systems of the human body.
2. Gain knowledge about the anatomy of various organs and the functions of them.
3. Gain knowledge about the sense organs and its functions.
4. Conduct an exhibition on anatomy and physiology with charts, models and working models.

2.1 INTRODUCTION

Human body is a developed multicellular organism. It consists of billions of cells. Tissues are formed from many cells eg. Muscles and bones etc., the body develops from a single cell fertilized egg cell. (zygote) This cell multiplies rapidly and forms a group of cells.

Different tissues of the body are developed from the multiplication of cells. Each tissue has special function to carry out in the body. These tissues are grouped together to form organs. An organ is a group of tissues arranged in a special manner to carry out a special task eg. Stomach, the heart, the kidney, bones, muscles and nerves etc., these organs are grouped together to make up a system. A system is a group of organs which together carryout one of the essential functions of the body eg. Digestive system, respiratory system etc.,
