gently clean around her nose and mouth with luke warm water.

7. Advise the casualty to rest quietly for a few hours and to avoid exertion and in particular not to blow her nose as this will disturb any clot.

EFFECTS OF EXTREME HEAT

7.11 HEAT STROKE

- It occurs when body can no longer controls its temperature by sweating and can quite suddenly.
- It is caused by very high environment temperature or illness like malaria.
- Exposure to heat and humidity for long time
- Prolonged confinement in hot atmosphere.
- Consumption of alcohol

Heat Stroke

The signs and symptoms of heat stroke are as follows:

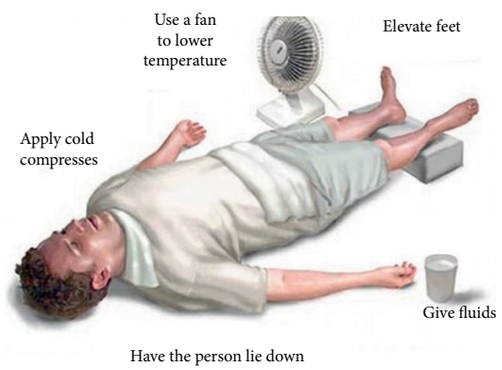

Body is very hot with temperature (up to 40°C)
No sweating
Full bounding pulse
Headache
Dizziness
Nausea and vomiting
Muscular Cramps
Dry flushed, hot skin

STUDENT'S ACTIVITY

You come across a man who looks very pale and weak and is breathing rapidly. His skin is extremely warm to the touch, he seems confused and irritable, and his speech is not clear. You notice his water bottle is empty. How to handle the situation?

Management

- Move the casuality to cold place and remove the clothing.
- If the casualty is conscious, then place him in half sitting position with head and shoulders supported.

- If the casualty is unconscious, then place in recovery position.
- Wrap the casualty in a wet sheet and keep it wet. Fan should be on.pour water all over the body. Cold sponging should be started
- Replace the body fluids. Give cold water to drink
- Apply ice cap with ice pieces over the head and neck.
- Cold water enema can be given
