loops, encircling the part in the form of a figure of eight. The upper loops being completely hidden by the successive turns end the lower loops forming the pattern. Each one covers the two thirds of the preceding loop and crossing in the same line.

Spica

Is a form of the figure of eight in which one turn is very much large then the other. It is used for joints at right angles to the body. E.g.: shoulder, groin and thumb

Spica

Wrist, forearmd upper arm bandages

The wrist and forearm are bandages by use of the simple and reverse spiral until the elbow is reached.

Bandages for the foot, ankle and leg

If the patient is in bed, the heel should be elevated on a support, about 6 inches high. If he is up and about, he should be seated in a chair with the foot supported on a stool or another chair. To avoid stooping, the nurse may, if she prefers sit opposite to te patient and take his foot on her knee.

Foot and ankle bandage

Head and other bandage

Cape line bandage

The bandage is, sometimes, used when the whole scalp is to be covered; a double headed roller bandage is used. The patient should be seated and the nurse should stand behind the patient. Place a center of the outer surface of the bandage in the center of the forehead, the lower border of the bandage lying just above the eyebrows. The bandage is completed by a circular turn round the head and pinned in the center of the forehead.

Cape line bandage
