Triangular sling

A triangular sling is used in treating a fracture of the collar bone. It helps to keep the and raised high up, giving relief from pain due to the fracture.

1. Place the forearm across the chest with the figures pointing towards the opposite shoulder and the palm over the breast bone.
2. Place an open bandage over the chest, with one end over the hand and the point beyond the elbow.
3. Tuck the base of the bandage comfortably, under the forearm and hand.
4. Fold the lower end, also round the elbow and take it up and cross the back over the uninjured shoulder and tie it with the other free hand into the hollow, above the collar bone.
5. Tuck the point between forearm and bandage,
6. Tuck the fold, so formed, backwards over the lower half of the arm and fix it with a safety pin.
