8.2 PRINCIPLE OF GOOD HOUSE KEEPING:

- Damp dusting is better than dry dusting as dust easily flies out into the environment.
- Dusting is done after sweeping.
- Soap and water (or) Disinfectant solutions are used for cleaning.
- Dusting should be done frequently. Use brush on grooved surfaces.
- Blood, Body discharged coagulate by heat. So it should be removed with cold water.
- Bacteria grows in dark. So provide maximum exposure to sunlight.
- Articles should be stored and arranged in proper and clean place, so that it can be conveniently located.

8.3 CLEANLINESS AND ORDERLINESS:

Cleanliness and orderliness go hand in hand. Nurses are held responsible for the cleanliness of the wards.

About 6,000 children die, each day from water & sanitation related illness (2016)

PURPOSE OF CLEANING:

- To avoid dirt accumulation
- To get rid of breeding places of micro-organisms and insects.
- To keep the articles in such a condition that they are ready for use at anytime.
- To maintain the aesthetic sense.

8.4 CARE OF RUBBER GOODS:

Common rubber goods used in hospitals are

- Air cushions
- Mackintoshes
- Hot water bags
- Rubber tubes
- Catheter
- Gloves
- Rubber beds etc

Care of rubber goods in hospitals:

- Rubber goods should be washed with a mild soap, rinse and dried in the utility room.
- Mackintoshes needs to be spread on a flat surface, wet with cold water, apply soap and water to remove blood and body discharges.
- Disinfection with Disinfectant 1:40 solution is done and dried by hanging them on cylindrical pole
- Both surfaces are dried and powdered
- Store them rolled in a dark cool place
- Rubber tubes (catheters) after cleaning with soap and water under running water, boil it for 5 mts and dry it by hanging and then, stored in air tight containers.
- Reboil/autoclave them before use. Check for kink in tubes before use.
