Bathing rooms

- The floor should be scrubbed and washed daily to prevent slipping
- Use toilet sanitizers and toilet freshener's to give a pleasant feeling to the patient

Lavatories

- Lavatory pans should be cleaned with toilet cleaners. Brush and acid are used to remove stains.
- The patients and relatives should be taught about proper use of lavatories

Hand washing sinks

- The sinks are cleaned with soap and water.
- Stains are removed using mild acids.
- Blocks of drains needs immediate attention
- Awareness about healthy practices to patients and their relatives is needed to avoid blocks due to food waste

Fact:
"You can't Flush diapers, sanitary napkins and tampons in the lavatories or else you'll make the toilet Gush."

CONCLUSION
