2.3.6 Bones of the lower limb

Each lower limb consists of 31 bones.

- Innominate bone – 1
- Femur bone – 1
- Patella – 1
- Tibia – 1
- Fibula – 1
- Tarsal bones – 7
- Metatarsal bones – 5
- Phalanges – 14

Innominate bone or hip bone:

The hip bone is an irregular flat bone, which has 3 parts – Ilium, ischium and pubis.

Femur bone (thigh bone:) It is the largest and strongest bone in the body.

Patella kneecap: It is a small bone at the front of the knee joint.

Tibia: Tibia is the long bone on the inner side of the lower leg.

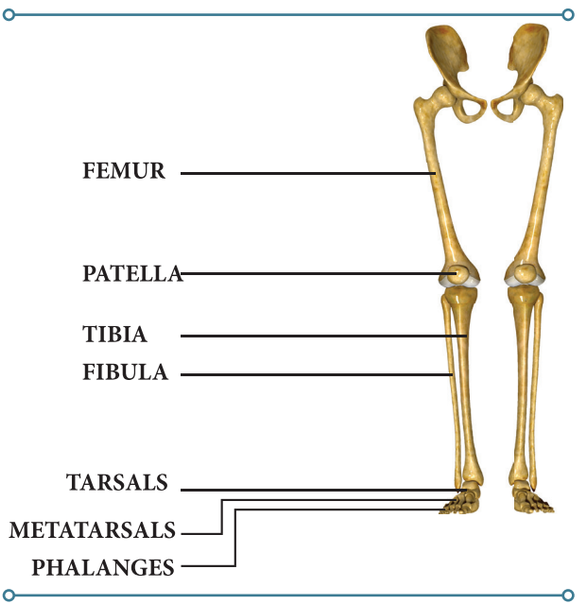

Fibula: Fibula is a long thin bone on the outer side of the leg.

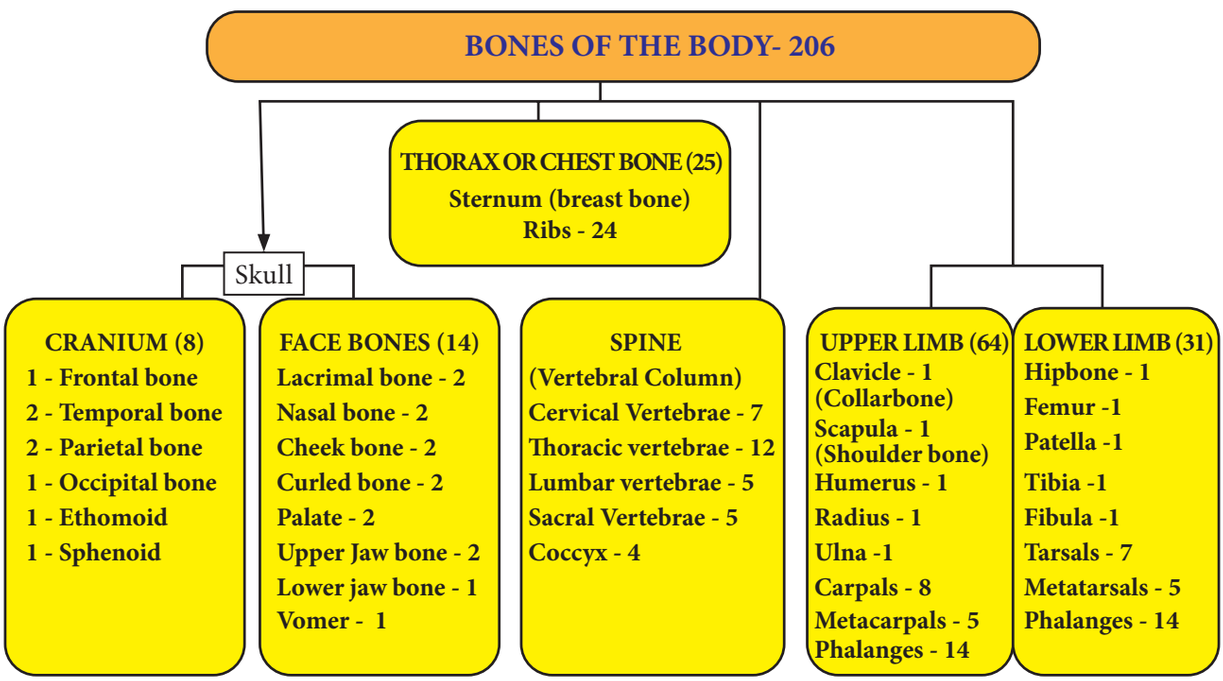

Tarsal bones: Tarsal bones of the ankle are seven short bones. The largest is the heel bone (calcanium).

Meta tarsal bones: Metatarsal bones are five long bones in the front of the feet. They support the toes.

Phalanges (toe bones): Fourteen in number and they are the smallest of the long bones.
