Unit 2

PERSONAL HYGIENE

2.1 INTRODUCTION

The word hygiene refers to "the science of health and its maintenance, the prevention of disease, and sanitary practices". Personal Hygiene is the activity of self-care, including bathing and grooming. Care of the skin, hair, nails, mouth, teeth, eyes, ears, nasal cavities and perineal and genital areas.

Factors influencing personal hygiene practices

1. Development level
2. Cultural back ground
3. Socio economic status
4. Religion
5. Health status

2.2 MOUTH CARE

The mouth cavity is lined with mucus membrane continuous with the skin. The mucus membrane is an epithelial tissue that lines and protects organs, secretes mucus to keep passage ways of digestive system moist and lubricated and absorbs nutrition.

Purposes of Mouth Care

1. Oral Hygiene helps maintain the healthy state of the mouth, teeth, gums and lips.
2. Brushing cleanses the teeth from food articles, plaque and bacteria.
3. Brushing massages the gums.
4. Brushing relieves discomfort resulting from unpleasant odours.
5. Flossing helps remove plaque and tarter from between teeth to reduce the gum inflammation and infection.
6. Oral hygiene gives a sense of well being
7. Proper oral hygiene stimulate appetite.
8. To improve taste.
