musculo skeletal system and constitute 40-50% of body weight. There are totally 639 muscles in human body.

A Person uses 17 muscles when he smile ☺ and 43 muscles when he frown.

FUNCTIONS OF MUSCULAR SYSTEM

- Movement
- Support
- Heat Production

There are three types of muscles

- Voluntary Muscles
- Involuntary Muscles
- Cardiac Muscle

VOLUNTARY MUSCLES

These are connected with the skeletal system causing the joints to move. They are called voluntary because their action can be controlled by the will.

Deltoid: It is a triangular muscle covering the shoulder joint and attached to the shoulder blade collar bone and humerus.

Gluteal: It is the muscles of the buttocks. Attached to the posterior surface of the ilium, sacrum and to the femur. They help to extend the hip joint.

INVOLUNTARY MUSCLES

Work without conscious control by the individuals are found in the internal organs.

CARDIAC MUSCLE

A special type of muscle found only in the heart. The fibres are striped, but the muscle is not under control of the will.

2.5 NERVOUS SYSTEM

Functional unit of nervous system is neurons.

Nervous system functions like a telephone system with the brain as the head office and nerves like the telephone wires, communication takes place with all parts of the body. By means of numerous messages sent and received by the various tissues and organs of the body to work in harmony.

BRAIN

Brain is the most important part of the central nervous system. It is well protected in the cranial cavity and has the following parts.

The cerebrum – fore brain

The cerebellum – hind brain

The mid brain

Brain stem – consisting of pons and medulla.

CEREBRUM

Cerebrum is the largest part of the brain and fills the front and top parts of the skull. It has two parts right and left. These two parts control the opposite sides of the body, so that diseases or injury of the right side of the cerebrum paralyses the left side of the body and vice versa.

Nerve impulses are sent from the brain move at a speed of 274 km/h.
