Normal positions.

Positions

1. Standing position:

In a standing position, the back should be straight; feet firmly on the ground, about 4 to 6 inches apart to give an adequate base of support, with the toes pointing straight ahead or slightly toed out; head and rib cage held high; chin, abdomen, and buttocks pulled in; and knees slightly bent.

2. Sitting position:

In a sitting position, the back should be straight, with the weight resting equally on the buttocks and under surface of the thigh, but not on the base of the spine.

Positions used for patients.

Positions

3. Dorsal position (Supine.):

Patient is flat on the bed with legs extended and arms at the sides of the body. This is not a comfortable position, as the curves of the body are not supported.

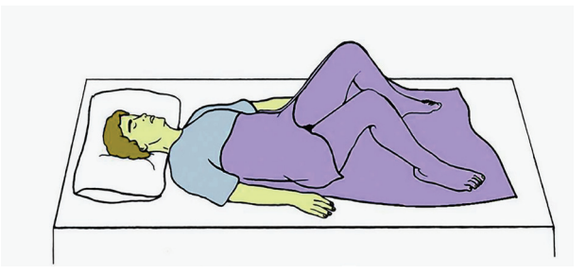

Indications

- Surgical procedures, it allows access to the peritoneal, thoracic and pericardial regions; as well as the head, neck and extremities.

4. Dorsal recumbent position:

Place patient flat on back with one pillow under head; have knees flexed and separated and feet flat on bed.

Indications

- Rectal, vaginal and pelvic examinations and treatments.
- For normal Deliveries.

5. Lateral Position:

Patient lies on his side with spine straight. The knees are flexed; the upper knees are more flexed than the lower one. Pillows may
