be provided for the head, in between the legs, and to support the back and abdomen. The lower arm is kept above the head and the upper arm is placed on a pillow in front.

Indications

- General comfort, rest and relaxation.
- Back care.

The arms and legs do not bear the weight of the body.

6. Sims or Left Lateral position:

Place patient on left side somewhat obliquely across the bed with buttocks to edge of mattress. Incline the body forward, draw the left arm back under patient and place the right arm free in front. The thighs should be flexed upon the body, the right more than the left.

Indications

- Vaginalexaminations.
- Perineal examination.
- Rectal examinations.
- Post operative, to maintain a clear airway.

7. Jack knife position:

Place patient on a prone position with the hips directly over the band of the examining table. Tip the table with the head lower than the hips. Lower the foot part of the table so that the patient's feet are below the level of his head.

Indications

- For drainage after any procedures.
- Operation on the rectum and coccyx.

8. Knee Chest Position:

Place patient in the prone position, then assist her to kneel so that her weight rests on her chest and knees. Turn head to one side and flex her arms at the elbows extending, then to the bed in front of her. Be sure the thighs are perpendicular to the level of the head. Watch pulse and general condition of the patient.

Indications

- To obtain better exposure of the vagina, cervix, and rectum.
