- To examine the bladder.
- To help correct retroversion of the uterus.
- To administer caudal and sacral anesthesia.
- Vaginal and rectal examinations.
- Operative procedures on the vagina, rectum and perineum.
- Operative deliveries

9. Lithotomy Position:

A position of the body for medical examination, pelvic or abdominal surgery, or childbirth in which the individual lies on the back with the hips and knees flexed and the legs spread and raised above the hips often with the use of stirrups.

Indications

- Abdominal surgeries.
- Childbirth.
- Pelvic examination.
- Urologic examination of the prostate.
- Male urethral surgery. Examination or operations on rectum and genital organs.

10. Prone Position:

Patient lies flat on his abdomen with head kept on a pillow and turned to one side and another pillow under the lower chest. Pillows are kept under the waist and under the lower legs. The arms are flexed at the elbow and kept above the head.

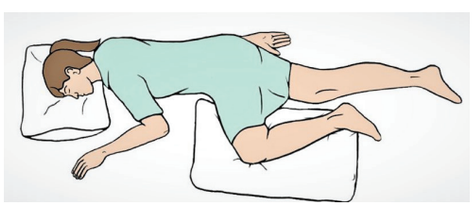

Indications

- For treatment on the back.
- To secure drainage of pus in front of the abdomen.
- When there is bedsore or burns or an injury at the back (spine.)
- Change of position for patients with fractured spine.

11. Sims position or semi prone position:

This is a modified left lateral

position. The patient lies on the left side. Head, shoulders and chest are turned forward so that her chest rests on the pillow. The right knee is well flexed and rests on the bed in front. The left knee is slightly flexed and is positioned behind the right knee.

Indications

- Vaginal examination.
- For rest and relaxation.
