7.7 THORAX

Thorax is formed by 12 thoracic vertebrae at the back, the sternum [breast bone] in front and the 12 pairs of ribs with their cartilages on sides.

The ribs are twelve pairs of the long curved bones. The upper seven pairs which are separately attached to the sternum by its cartilages are called true ribs.

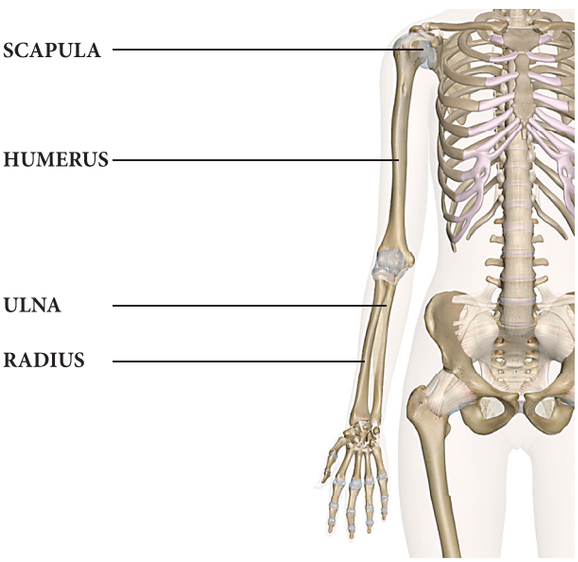

The next five pairs of ribs are called false ribs because they are joined by their cartilages to those of the ribs above and not directly to the sternum.

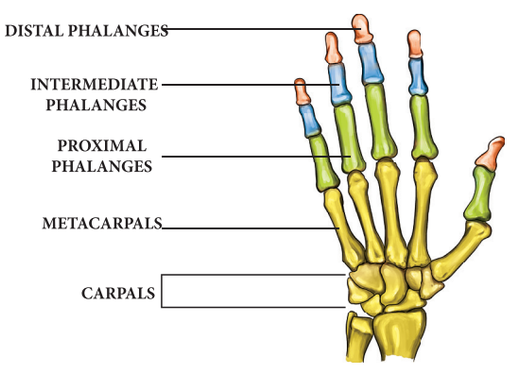

The last two pairs are not connected to the sternum at all and are called floating ribs.

Clavicle – 1	The clavicle or collarbone is a long curved bone forming the interior part of the shoulder girdle.
Scapula – 1	It is a large, flat, triangular shaped bone. This is otherwise called shoulder blade.
Humerus – 1	It is the longest bone in the upper limb
Radius – 1 Ulna – 1	They extends from the elbow joint to the wrist joint
Carpal bones – 8	It consists of short bones arranged in two rows
Meta carpal – 5	It consists of 5 bones seen in the palm.
Phalanges – 14	These form the skeleton of the fingers. 3 phalanges in each finger and only 2 phalanges in the thumb

7.8 BONES OF THE UPPER LIMB

Each upper limb consists of thirty two bones.
