Unit
10 APPLICATION OF BANDAGES

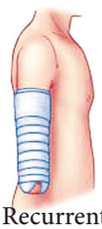

S4BC7F

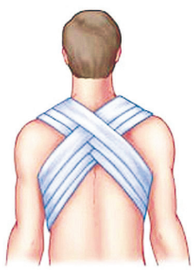

10.1 INTRODUCTION

A bandage is a piece of material used either to support a medical device such as a

- Dressing
- Splint
- Support or
- To restrict the movement of a part of the body

Four tailed bandage

Recurrent bandage of head

Barton bandage (single turn)

Many tailed bandage

Uses

Bandages are used to:

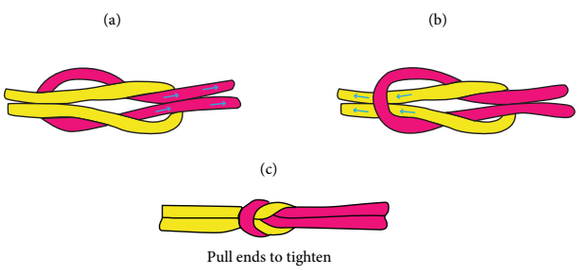

1. Maintain direct pressure over a dressing to control bleeding.
2. Keep dressings or splints in position.
3. Support a limb or joint.
4. Prevent movement.
5. Prevent or reduce swelling.
6. Help in lifting and carrying casualties.

10.2 TYPES

1. Triangular bandages
2 Roller bandages

A reef knot is used to tie the ends of the bandage, because it is flat and will not slip. The rule for tying a reef knot is 'right over left then left over right'.
