Unit 4

PRINCIPLES AND PRACTICE OF NURSING

RYQ2ZP

உற்றான் அளவும் பிணியளவும் காலமும்
கற்றான் கருதிச் செயல்.

– குறள்: 949

Kural 949:
The learned (Physician) should ascertain the condition of his patient, the nature of his disease, and the season (of the year) and (then) proceed (with his treatment).

LEARNING OBJECTIVES

At the end of this chapter, the student will be able to,

- Define the Nursing Process
- Know the Steps in Nursing Process
- Admission process
- Orient to the ward
- Care of belongings
- Discharge the patient
- Bed and Bed making
- Create a therapeutic environment
- Body mechanics and positioning
- Meet the Hygienic needs
- Meet the Safety and Comfort needs
- Know the Activity & Exercises, Rest & Sleep
- Do the Moving, Shifting & Lifting patients
- Meet the Oxygen needs
- Meet the Elimination Needs.

4.1 INTRODUCTION:

Nursing is a profession within the health care sector focused on the care of individuals, families, and communities so they may attain, maintain, or recover optimal health and quality of life. Nurses may be differentiated from other health care providers by their approach to patient care, training, and scope of practice. Nurses develop a plan of care, working collaboratively with physicians, therapists, the patient, the patient's family and other team members, that focus on treating illness to improve the quality of life. Nurses may help coordinate the patient care performed by other members of a multidisciplinary health care team such as therapists, medical practitioners and dietitians. Nurses provide care both interdependently, for example, with physicians, and independently as nursing professionals. Nurses are ultimately the backbone of any health care delivery system.
