Implementation Phase

The implementing phase is where the nurse follows through on the decided plan of action. This plan is specific to each patient and focuses on achievable outcomes. Actions involved in a nursing care plan include monitoring the patient for signs of change or improvement, directly caring for the patient or performing necessary medical tasks, educating and instructing the patient about further health management, and referring or contacting the patient for follow-up. Implementation can take place over the course of hours, days, weeks, or even months.

Sanjay is prescribed the medication and takes it as recommended. One week later, he has a day where he feels especially sick and calls the doctor's office. The nurse explains that the medication could cause nausea as a side-effect and advises Sanjay to drink jeeragam water and avoid any foods that generally upset his stomach. Sanjay continues taking the medication and goes to the gym four times during the two week period. Once the two weeks has passed, he returns to the doctor's office for his follow-up appointment.

Evaluation Phase

Once all nursing intervention actions have taken place, the nurse completes an evaluation to determine if the goals for patient wellness have been met. The possible patient outcomes are generally described under three terms:

1. Patient's condition improved.
2. Patient's condition stabilized.
3. Patient's condition deteriorated, died, or discharged.

In the event the condition of the patient has shown no improvement, or if the wellness goals were not met, the nursing process begins again from the first step.

When Sanjay returns, the nurse asks him a series of questions about how he is feeling. Sanjay replies that he has been having an easier time breathing and feels significantly less tired since exercising and taking the medication. The nurse marks "Patient's Condition Improved" on his official medical records and congratulates Sanjay on his well being. She then advises him to remain on the medication for one more month and to continue his exercise.
