Ashoka realised that an effective ruler needed to be fully informed about what was happening in his kingdom and insisted that he should be advised and informed promptly wherever he might be (Major Rock Edict 6). He insisted that all religions should co-exist and the ascetics of all religions were honoured (Major Rock Edicts 7 and 12). Providing medical care should be one of the functions of the state, the emperor ordered hospitals to be set up to treat human beings and animals (Major Rock Edict 2). Preventing unnecessary slaughter of animals and showing respect for all living beings was another recurrent theme in his edicts. In Ashoka's edicts, we find an alternative humane and empathetic model of governance. The edicts stress that everybody, officials as well as subjects, act righteously following *dhamma*.

4.7 Economy and Society

Agriculture

Agriculture formed the backbone of the economy. It was the largest sector in terms of its share in total revenue to the state and employment. The Greeks noted with wonder that two crops could be raised annually in India because of the fertility of the soil. Besides food grains, India also grew cash crops such as sugarcane and cotton, described by Megasthenes as a reed that produced honey and trees on which wool grew. These were important commercial crops. The fact that the agrarian sector could produce a substantial surplus was a major factor in the diversification of the economy beyond subsistence to commercial production.

Crafts and Goods

Many crafts producing a variety of manufactures flourished in the economy. We can categorise the products as utilitarian or functional, and luxurious and ornamental. Spinning and weaving, especially of cotton fabrics, relying on the universal availability of cotton throughout India, were the most widespread occupations outside of agriculture. A great variety of cloth was produced in the country, ranging from the coarse fabrics used by the ordinary people for everyday use, to the very fine textures worn by the upper classes and the royalty. The *Arthasastra* refers to the regions producing specialised textiles – Kasi (Benares), Vanga (Bengal), Kamarupa (Assam), Madurai and many others. Each region produced many distinctive and specialised varieties of fabrics. Cloth embroidered with gold and silver was worn by the King and members of the royal court. Silk was known and was generally referred to as Chinese silk, which also indicates that extensive trade was carried on in the Mauryan Empire.

Metal and metal works were of great importance, and the local metal workers worked with iron, copper and other metals to produce tools, implements, vessels and other utility items. Iron smelting had been known for many centuries, but there was a great improvement in technology after about 500 BCE, which made it possible to smelt iron in furnaces at very high temperatures. Archaeological finds show a great qualitative and quantitative improvement in iron production after this date. Improvement in iron technology had widespread implications for the rest of the economy. Better tools like axes made more extensive clearing of forests possible for agriculture; better ploughs could improve agricultural processes; better nails and tools improved woodwork and carpentry as well as other crafts. Woodwork was another important craft for ship-building, making carts and chariots, house construction and so on. Stone work–stone carving and polishing–had evolved as a highly skilled craft. This expertise is seen in the stone sculptures in the *stupa* at Sanchi and the highly polished Chunar stone used for Ashoka's pillars.
