programmes of the Government. Their services mostly available to government only. A detailed study on all the above warehouses is given at the end of this chapter.

c. Public Warehouse

It is open for public at large. Most of the business organisations, especially small and medium scale units cannot afford to have their own warehouses. They may be owned by an individual or some agency. These warehouses operate as per the rules and regulations formed by the Government.

d. Co-operative Warehouses

There are warehouses owned and managed by the marketing co-operative societies or agricultural co-operative societies. They are set up to provide warehousing facilities to their members. Example, National Co-operative Development Corporation (NCDC).

e. Bonded Warehouses

Bonded warehouses are those warehouses, which are licensed by the government to accept storage of imported goods which are not cleared due to non-payment of customs duty by the importer. Branding can be undertaken in the warehouse itself. Bank loans can be obtained by submitting the receipt issued by these warehouses as collateral security. Strict supervision and control is imposed by custom authorities on their operation and functioning.

f. Institutional Warehouses

Different institutions and bodies have their own warehouses on account of the nature of their operations. For example, Banks, Railways, etc, have their own warehouses for conducting their activities. Various transport agencies also maintain warehouses for storing the goods which are to be despatched and received.

g. Distribution Center Warehouses

Goods which need to be temporarily stored for one or two days so that they can be distributed to other offices or customers are stored in Distribution Centers. They are owned by the manufacturer or wholesalers.

B. On the Basis of Commodities Stored

a. General Warehouses

They are ordinary warehouses which are useful for storing most of the dry food grains, fertilisers, etc. Protective measures against rat, insects, etc. are undertaken by them.

Village Storage or Warehouse

Underground storage structures are used by farmers in villages to store food grains. They are safer from threats from various external sources of damage, such as theft, rain or wind. Separate peripheral structures with mud are erected as surface storage structure for food grains. PAU bin, Pusa bin, HapurTekka, etc. are used for small scale storage of grains. Cap storage, Silos, etc, are used for large scale storage of food grains.
