

Bullet Rail

Pipeline Transport

Ropeway Transport

Hyperloop

f) Ropeway Transport

A Ropeway is another means of transport in naval lifting device. It can be operated in the place where road construction is impractical and costly. Certain limit of goods or people can be transported with the help of (naval lifting device) electricity. In the hilly remote areas ropeway system of transport may be suitable means of transport.

g) Hyper loop Transport

Hyper loop is a proposed system of transport that would see pods or containers travel at high level speed through a tube that has been pumped into a near vacuum. The train pods would either float using magnetic levitation technology or float using air caster "Skis", similar to how pucks travel across an air hockey table. With so little friction in the tunnel, the pod would be able to travel at immense speed with projected top speeds of 760 mph. Hyper loop is a futuristic transport system. Tunnels for the Hyper loop would be built either above or below ground, at only around 3 meter in diameter, lacking up a smaller ground footprint than traditional rail or road. Elon Musk an entrepreneur had proposed this mode of transport as a "fifth mode of transport" in 2012.

B. Water Transport

"Water is a free gift of nature'. Human civilization through gradual application of science and technology, have utilized water resources for economic, political and military activities. Remarkable advancements are taking place in water transport due to considerable improvement in the construction, design motive power, speed and safety of ships and boats.
