Microbiology graduates can apply for various posts available for them in these laboratories. There are also vacancies available for these graduates in Government hospitals.

Teaching Profession in Government Sector after M.Sc Microbiology

Candidates who want to work in the teaching field after M.Sc Microbiology can apply to various colleges or universities. An M. Phil / Ph.D degree is required for these graduates to apply for these posts. They also need to clear NET exam so as to be eligible for teaching posts available in various universities.

Microbiology in India

There are number of Institutes engaged in microbiological research in our country. The Indian Institute of Petroleum, Dehradun; Tata Energy Research Institute, Delhi and National Chemical Laboratory, Pune have worked on microbial dewaxing of heavier petroleum fractions. The Institutes has also played a vital role on the area of microbial enhanced oil recovery and production of biosurfactants. National Institute of Nutrition, Hyderabad and National Institute of Occupational Health, Ahmedabad have already completed a long time plan on monitoring and surveillance of food contaminants hazards in India while genome analysis and synthetic gene design for modulation of genome expression *invivo* was carried out by the scientists of Indian Institute of Science, Bangalore.

The Future of Microbiology

Microbiology has a clearer mission than other scientific disciplines. It is confident of its value because of its practical significance. The following brief list will give us some idea of what the future may hold:

- Everyday microbes are changing its nature (mutation) and new diseases are emerging. Microbiologists will have to respond to these threats.
- Microbiologists must find ways to stop the spread of established infectious diseases.
- Microbial diversity is another area requiring considerable research.
- Much work needs to be done on microorganisms living in extreme environmental conditions. The discovery of new microorganisms may lead to further advances in industrial processes and enhanced environmental control.
- The genomes of many micro organisms already have been sequenced, and many more will be determined in the coming years.
- Microorganisms are essential partners with higher organisms in symbiotic relationships. Greater knowledge of symbiotic relationships can help improve our appreciation of the living world. It also will lead to improvements in the health of plants, livestock and humans.
