Based on integrative characteristics	
Microbial Cytology	The study of microscopic and sub microscopic details of microorganisms
Microbial Physiology	The study of biochemical functions of microbial cell. It also includes the study of microbial growth, microbial metabolism and microbial cell structure
Microbial Ecology	The study of relationship between microorganisms and their environment
Microbial Genetics	The study of gene are organisation and regulation in microbes in relation to their cellular functions.
Cellular Microbiology	A discipline bridging microbiology and cell biology
Evolutionary Microbiology	The study of the evolution of microbes
Microbial Taxonomy	The study of naming and classification of microorganisms
Microbial Systematics	The study of the diversity and genetic relationship of microorganisms
Systems Microbiology	A discipline bridging systems biology and microbiology
Generation Microbiology	The study of microorganisms which have the same characters as their parents
Molecular Microbiology	The study of the molecular principles of physiological processes in microorganisms
Nano Microbiology	The study of microorganisms at nano level
Exo Microbiology (or Astro Microbiology)	The study of microorganisms in outer space
Biological Warfare	The study of microorganisms used in weapon industries
Applied microbiology	
Medical Microbiology	The study of the pathogenic microbes and the role of microbes in human illness. Includes the study of microbial pathogenesis and Epidemiology and is related to the study of disease, Pathology and Immunology
Pharmaceutical Microbiology	The study of microorganisms that are related to the production of antibiotics, enzymes, vitamins, vaccines, and other pharmaceutical products
