Table 12.9: Microbial diseases of the reproductive system

Disease	Pathogen	Symptoms
Bacterial Diseases		
Gonorrhea	*Neisseria gonorrhoeae*	Painful urination, discharge of pus in males, abnormal vaginal discharge in females
Nongonococcal urethritis (NGU)	*Chlamydia trachomatis* or other bacteria, including *Mycoplasma hominis* and *Urea plasma urealyticum*	Painful urination and watery discharge, Chronic abdominal pain in females
Syphilis	*Treponema pallidum*	Initial sore at site of infection, later skin rashes and mild fever; final stages may be severe lesions, damage to cardiovascular and nervous systems.
Lymphogranuloma venereum (LGV)	*Chlamydia trachomatis*	Swelling in lymph nodes in groin
Viral Diseases		
Genital Herpes	*Herpes simplex* virus type 2; HSV type 1	Painful vesicles in genital area
Genital warts	Human papilloma viruses	Warts in genital area
AIDS	Human Immunodeficiency virus (HIV)	loss of appetite, weight loss, persistent cough, attack on T cells (immunocompromise), easily prone to fungal and other bacterial pathogens as secondary opportunistic infections.
Fungal Diseases		
Candidiasis	*Candida albicans*	Severe vaginal itching, yeasty odor, yellow discharge
Protozoan Diseases		
Trichomoniasis	*Trichomonas vaginalis*	Vaginal itching, greenish yellow discharge
