Year	Name of the Scientists	Contributions to immunology
Specificity of immune response		
Around 1900	Jules Bordet	Demonstrated that nonpathogenic substances, such as red blood cells from other species, could also serve as antigens
	Karl Landsteiner	Showed that injecting an animal with almost any non-self, organic chemical could induce production of antibodies that would bind specifically to the chemical
Molecular immunology		
1959	Porter	Separated fragments of immunoglobulin
	Edelman	Heavy and light chains of antibodies were separated by him
1965	Putnam, Hirschmann and Craig	Discovered constant and variable regions of immunoglobulin
1979	Kung et al.	Described the first monoclonal antibody identifying a T cell subset
1982-83	Allison et al and Haskins et al.	Isolated T cell receptor
Immunogenetics and Genetic Engineering		
1936	Gorer	Discovered the major histocompatibility antigens
1968	McDevitt and Tyan	Showed that immune response genes were linked to the genes of the major histocompatibility complex (MHC)
1974	Doherty and Zinkernagel	Reported that recognition of antigen by T cells was restricted by MHC molecules
1978	Tonegawa et al.	Demonstration of immunoglobulin gene rearrangement
